

living aquarium

interactive virtual aquarium

create a highlight at your location with our virtual interactive aquarium

The aquarium is available in various sizes for wall, table, bar and even floor. Highlight: The 3D aquarium is interactive and can be individually designed. As the audience approaches the aquarium or touches the fish, they react either by escaping or by following finger movements. Even virtually feeding the fish is possible.

There is a huge selection of real fish, cartoon fish and special creatures such as mermaid, dolphin, shark, etc. which you will not find in a real aquarium at your location. All creatures behave very realistically. You can always change the world of fish, choose other living environments and integrate your own logos, images or information in the aquarium.

why

The best part is that such an interactive aquarium is not more expensive than a traditional aquarium. Plus it also requires no care, maintenance and feeding. If you compare the costs of financing the acquisition and maintenance of a real aquarium, you will be surprised that the virtual version is cheaper and the virtual aquarium can be customized, supplemented and changed without any construction work.

where

The system is especially suitable for waiting rooms in medical practices, as a design element in restaurants, hotels, bars, or as an eye catcher for your home. The interaction, meaning the reaction of the creatures to the touch of the audience, is the key aspect of all our effects. Children as well as adults are just as excited about the interaction. A lasting impression remains.

how

The interactive aquarium can be created through projections on the wall, table, floor or counter. Likewise, one or more linked displays/TV-screens can be used. This depends on what is more suitable for your location. By using seamless displays high quality design installations can be achieved.

extensibility

There are numerous effects at low cost that can be displayed in a variation with the aquarium. These range from an interactive flower meadow with butterflies to informative content such as interactive advertising. When using multiple effects you can adjust the chronology yourself. Our total range of interactive effects can be found on our website: www.vertigo-systems.com

›living floor‹

When visitors are interacting with the fish and the water on the ›living floor‹ they become part of the underwater world that's surrounding them.

›living walk‹

The ›living walk‹ is visible from far away and invites the audience to playfully interact with the 3D animated fish. The ›living walk‹ represents the optimum crowd puller.

›living table‹

The ›living table‹ gives the viewer the opportunity to get even closer to the underwater world and to interact with it.

›living bar‹

The ›living bar‹ is the ideal attention-getter and a playful way to easily get acquainted. The marine life will react to people's hands and objects placed on the bar.
